Doctor scale with foot switches and double display

Read twice as well

A double display has the decisive advantage that it can be read from both sides. The doctor can therefore quickly record the result, regardless of whether he is in front of or behind the patient. And the patient feels involved, because the scale also shows them their weight.

Medical Device Regulation (MDR) certified

Setting up, tapping, weighing

Equipped with levelling feet and a level, the seca 878 dr can also be safely set up horizontally on uneven surfaces. One battery set is sufficient for thousands of weighings and makes the seca 878 dr together with a carrying handle and low weight well suited for mobile use. Tapping the foot pedal activates the scale, the other foot pedal operates the mother+child function, allowing a child to be weighed on the mother's arm.

Quality from seca: sturdy and rainforest tested

In elaborate testing, not only is durability tested, but also resistance to humidity and heat as well as impact resistance. A stable steel frame, ribbed components and high-quality ABS plastic, from which motorcycle helmets are also manufactured, ensure that seca scales comply with easiness limit values. A long scale life is thus guaranteed, whether in an air-conditioned room or in a temporary practice in the rainforest.
